KingdomFlow for Zoom: test plan for Marketplace review

Production site: https://www.kingdomflow.in App type: Zoom General app (OAuth + Meeting SDK for web). OAuth redirect URL: `https://www.kingdomflow.in/api/zoom/callback`

1. What the integration does

KingdomFlow is church-management software. A church (an "organization") connects **its own Zoom account** once. After that, its staff can create Zoom meetings from KingdomFlow, start them as host or join them as a guest **inside the KingdomFlow page** (Zoom Meeting SDK for web), share the invite link, and cancel them. Members who use the KingdomFlow mobile app can be sent a "meeting is live" push notification with a Join button.

No Zoom data is read other than the connecting user's profile (name, email, id). KingdomFlow does not read recordings, chats, participants or contacts.

2. Scopes requested and where each is used

Scope	Required?	Used for	How to test
`user:read:user`	Required	`GET /users/me` once, right after consent, to show "Connected as ()"	Section 5, step 5
`meeting:write:meeting`	Required	`POST /users/me/meetings` when a meeting is created	Section 6
`meeting:delete:meeting`	Required	`DELETE /meetings/{id}` when a meeting is deleted in KingdomFlow	Section 9
`user:read:zak`	Required for "Start as host" inside KingdomFlow	`GET /users/me/token?type=zak`, passed to the Meeting SDK so the church's account can start the meeting in the page	Section 7

There are **no optional scopes**. All four are needed for the full flow. Without `user:read:zak` the in-page host start is not possible; the app then offers a fallback link to start the meeting in the Zoom desktop app (step 7.6).

The Meeting SDK signature is generated server-side from the app's Client ID/Secret; the secret is never sent to the browser.

3. Test accounts

KingdomFlow accounts are provisioned by us. Replace the placeholders before sending this plan; do not reuse these examples.

Role	Login (email / password)	Can do
Church Owner (primary)	`<REVIEWER_OWNER_EMAIL>` / `<REVIEWER_OWNER_PASSWORD>`	Everything, including connect and disconnect Zoom

Role	Login (email / password)	Can do
Church Admin	`<REVIEWER_ADMIN_EMAIL>` / `<REVIEWER_ADMIN_PASSWORD>`	Connect/disconnect Zoom, create, start, delete
Staff with full K-Connect access	`<REVIEWER_STAFF_EMAIL>` / `<REVIEWER_STAFF_PASSWORD>`	Create, start, join, delete. Cannot connect or disconnect
Staff with read-only K-Connect access	`<REVIEWER_READONLY_EMAIL>` / `<REVIEWER_READONLY_PASSWORD>`	See meetings and join as guest only. Cannot create, start or delete
Staff without K-Connect access	`<REVIEWER_NOACCESS_EMAIL>` / `<REVIEWER_NOACCESS_PASSWORD>`	Sees "Access restricted"

Sign-in page: https://www.kingdomflow.in/login (email and password).

Zoom account for the reviewer. The reviewer uses their own Zoom account (a **licensed/Pro** account is best, because hosting from the SDK needs a licensed host; a Basic account works with Zoom's 40-minute limit). While the app is not yet published, that Zoom account must be allowed to install the app (same Zoom account as the app owner, or added as a tester). Zoom credentials are supplied by the reviewer; we do not provide any.

Two-factor authentication. KingdomFlow sign-in does not use 2FA, so none is needed to reach the screens below. If the reviewer's Zoom account has 2FA, they will be asked for it on Zoom's own sign-in page during step 5.

Paid plan / access controls. - The Zoom feature does not need a paid KingdomFlow plan. It is part of the K-Connect tab, which is on for the reviewer organization. - K-Connect also has a per-plan monthly minutes limit for KingdomFlow's own video calls. It does **not** apply to Zoom meetings, which follow the Zoom account's own plan limits. - Each KingdomFlow staff login can be given per-tab permissions (none, read, write). The accounts above are pre-set to those levels.

4. Seed data in the reviewer organization

Pre-created for you: one organization ("Reviewer Church"), the five logins above, two branches ("Main Branch", "North Branch"), and a few members. No Zoom connection exists at the start, so the connect step can be tested from scratch.

Optional, for the push-notification test (section 10): install the KingdomFlow mobile app (Android or iPhone) and sign in as a member. Provide one mobile login: `<REVIEWER_MEMBER_PHONE_OR_EMAIL>` (we will confirm how it signs in when we send the credentials). Skip section 10 if no phone is available; it does not affect the Zoom review.

5. Connect the Zoom account (OAuth)

Sign in at https://www.kingdomflow.in/login as the **Owner**.

1. Open **K-Connect** in the left menu, then press **Zoom and Google Meet**. *Expected:* the page "Zoom and Google Meet" with a Zoom card showing **Connect Zoom** and a Google Meet card.
2. Press **Connect Zoom**. *Expected:* the browser goes to `zoom.us/oauth/authorize` showing the KingdomFlow app name and the four permissions above.

3. Sign in to Zoom if asked, then press **Allow**. *Expected:* you return to `…/dashboard/kconnect/conferencing`.
4. *Expected:* a green "Connected." message appears.
5. *Expected:* the Zoom card shows "Connected: ()" (this comes from `user:read:user`) and a **Disconnect** button.
6. Press **Connect Zoom** again, then **Cancel/Deny** on Zoom's page. *Expected:* you return with "The connection was cancelled." and the connection is unchanged.

Negative checks: 7. Sign out, sign in as **Staff with full K-Connect access**, open the same page. *Expected:* the Zoom card says "An owner or admin needs to connect the church's Zoom account." (or shows the connected account with no Disconnect button); only owners and admins can connect. 8. Open `https://www.kingdomflow.in/api/zoom/connect` directly while signed in as that staff user. *Expected:* redirected back with "Only an owner or admin can connect an account."; no Zoom page opens. 9. Open `https://www.kingdomflow.in/api/zoom/callback?code=abc&state=bad` while signed in as Owner. *Expected:* redirected back with "That sign-in expired. Please try again."; nothing is saved. (The state value is signed and bound to the user and organization.)

6. Create meetings (`meeting:write:meeting`)

As **Owner** (or Admin, or full-access Staff):

1. In the Zoom card, under **New meeting**, enter the title `Review test now`, leave **When** empty, set **Minutes** to `30`, leave **Who is it for?** as **Whole church**, then press **Create Zoom meeting**. *Expected:* the meeting appears in the list with the title, the length and the audience "Whole church". In Zoom (zoom.us → Meetings), a meeting `Review test now` exists with the waiting room enabled.
2. Create a second meeting titled `Review test scheduled`, pick a start time tomorrow, length `45`, audience **Main Branch**. *Expected:* it appears with its start time and "Main Branch". In Zoom it shows as a scheduled meeting at that time.
3. Create a third meeting for the audience **Group** → **Youth**. *Expected:* it appears with "Youth".
4. Try to create a meeting with an empty title, and one with **Minutes** `3`. *Expected:* with an empty title the **Create Zoom meeting** button stays disabled; with `3` minutes the message "Choose a length between 5 minutes and 24 hours" is shown. No meeting is created in either case.
5. Press the **copy** button next to a meeting. *Expected:* the Zoom invite link is copied and the icon changes to a check.

Negative check: 6. Sign in as **Staff with read-only K-Connect access**. *Expected:* the **New meeting** form and the **Start** and delete buttons are not shown.

7. Start as host inside KingdomFlow (`user:read:zak`, Meeting SDK)

Use **two browsers or profiles** for steps 7 to 10 (Host and Guest).

Host browser, signed in as Owner:

1. On the `Review test now` row press **Start**. *Expected:* a page titled with the meeting, with a **Start the meeting** button.

2. Press **Start the meeting** and allow the microphone/camera if asked. *Expected:* the Zoom meeting window loads inside the page and you are in as the **host** (host controls such as Participants/Security are visible). The Zoom account's name is shown as the host.
3. In Zoom the meeting shows as started.
4. Check the in-page Zoom controls: mute/unmute, start/stop video, share screen, chat, participants, reactions. *Expected:* all work normally.
5. Press **Leave** or **End**, then navigate back. *Expected:* the meeting ends or you leave cleanly and the page returns to the list.
6. Fallback check (only if the in-page start is blocked, for example by an unsupported browser): the page shows a link **Start it in the Zoom app instead**. *Expected:* opening it launches the Zoom client as host.

8. Join as a guest, and multi-user flow

Guest browser, signed in as Staff with full K-Connect access (or the read-only staff):

1. While the host is in the meeting (step 7.2), open K-Connect → Zoom and Google Meet and press **Join** on `Review test now`.
2. Press **Join the meeting**. *Expected:* the guest loads the same in-page Zoom window and lands in the **waiting room** (the meeting is created with the waiting room on and "join before host" off).
3. In the **Host** browser, open Participants and **Admit** the guest. *Expected:* the guest enters the meeting. Both sides see each other and can hear each other.
4. The host mutes the guest, then removes the guest. *Expected:* both actions work; the removed guest returns to the list.
5. Join as guest with the **Staff without K-Connect access** login. *Expected:* the K-Connect page shows "Access restricted"; no meeting can be opened.
6. Join as the **read-only** staff login. *Expected:* **Join** works; **Start** is not offered, and opening `…/zoom/<id>?as=host` still joins only as a guest.
7. Sign out and open `https://www.kingdomflow.in/dashboard/kconnect/conferencing/zoom/<any id>`. *Expected:* redirected to the sign-in page; meeting details are not shown to anyone who is not signed in to that church.

Cross-organization check (if a second organization is supplied): a user of another church opening the same URL gets "not found".

9. Delete a meeting (`meeting:delete:meeting`)

As Owner:

1. Press the trash icon on `Review test scheduled` and confirm the prompt ("It is cancelled in Zoom too"). *Expected:* it disappears from the list **and** is cancelled in Zoom (it no longer appears under Upcoming meetings in zoom.us).
2. Delete a meeting that was already deleted in Zoom directly. *Expected:* it still disappears from KingdomFlow with no error.

10. Optional: "meeting is live" notification (mobile app)

1. Sign in to the KingdomFlow mobile app on the member account in section 4.
2. As Owner on the web, **Start** `Review test now` (audience Whole church) and press **Start the meeting**. *Expected:* once the host is actually in the meeting, the member's phone receives "Review test now is live — A Zoom meeting has started. Tap to join." The person who started it does not get one.
3. Tap the notification. *Expected:* the Zoom join link opens.
4. Repeat for the **Main Branch** meeting. *Expected:* only members of that branch get the notification; the same meeting never notifies twice.

11. Disconnect (token revocation)

As Owner:

1. In the Zoom card press **Disconnect** and confirm the browser prompt. *Expected:* after confirming the prompt, the card returns to **Connect Zoom**, the **New meeting** form disappears, and existing meetings stay listed. Pressing **Start** on one and then **Start the meeting** shows "Connect your Zoom account first."
2. In Zoom → Account → Apps (My Apps), the KingdomFlow app no longer appears as installed, because KingdomFlow revokes the token with Zoom (`/oauth/revoke`).
3. Sign in as **Admin**; **Disconnect** is available to them, and not to staff.

12. Security and data handling points

- The OAuth `state` is signed and checked against the signed-in user and organization (section 5, step 9).
- Zoom access and refresh tokens are encrypted (AES-256-GCM) before they are stored and are never sent to the browser. The refresh token is replaced each time Zoom issues a new one.
- Only the church's owners and admins can connect or disconnect; other staff access follows per-tab permissions.
- The only personal data taken from Zoom is the connecting user's id, name and email.
- Privacy policy: https://www.kingdomflow.in/privacy · Documentation (no sign-in needed): https://www.kingdomflow.in/docs · Support: https://www.kingdomflow.in/contact

13. Known limits (not defects)

- Participant limits, meeting length and features such as breakout rooms follow the church's Zoom plan.
- Google Meet is a separate integration on the same page and is out of scope for this review.
- A Basic Zoom account ends a group meeting at 40 minutes.
